Ink Reset Keygen Idm

How to clear counter Canon IP 2770

1. When the counter nearly full, an orange light blinks on the Resume button 8 times. Switch to green Power button one time. Press a Resume button. The printer are working then. But if the counter is full a light on the power and Resume will flash alternately.It will show“Error number : 5B00” on the screen.

2. Connected POWER and USB line before the reset.(Must be installed a program driver before the reset.)

3. After downloading, you will get a file

but you have to change the file name extension from “.doc” to “.exe”, follow the sample below.

4. Double clicks on file ***IP2770.exe***

5. Notice at the USB port, it must be the same number as a printer’s driver. You can check it by go to Control panel ⇨ Printers and Faxes ⇨ Canon iP 2770 then right click and choose Printer Properties then choose Port as the picture

After checking the same port. Then go to service mode anf follow the steps.

- Turn off without pull the AC Power line out. Wait untill a printer is turning off. Press a Resume and Power button for a while and press Resume for 5 times. (There fore press a Resume also still on power button) After 5 times.Leave them. If it correct, the green light will flash on ready to work.

6. Click Reload , will get a new USB port

7. Add two sheets of paper and press a Main button, wait until the printer is working (The program will be highlighted in gray). After that will show the text , click OK. Print one of a paper.

8. Press a Platen button. Wait until a printer working (The program will be highlighted in gray). It will show “Error 001”, press OK.

9. Press EEPROM Wait until a printer working (The program will be highlighted in gray) and print one more paper. After that will show the text , click OK.

10.When completed step then turn off and turn on, it will work the same.(Sometimes have to press Power twice to turn off)
